SUMMARY

- I have around 10 years of total IT Experience and 6+ years of experience in Cloud (Azure, AWS), DevOps, Windows, and Linux system administration.
- Worked On AWS services like EC2, IAM, S3, VPC, VPC Peering, Subnets, Security Groups, SNS, EBS, Route53, Autoscaling, CloudTrail, CloudWatch, PrivateLinks, Transit Gateway
- Experience with various services in Azure like Virtual machines, Storage accounts, Virtual Networks, Load Balancers, Active Directory, VM scale sets, Key Vaults, CoreDNS, Private Link, Private Endpoint.
- Working experience on creating/modifying Terraform Modules for AWS, Azure resources
- Good knowledge of Version Control System Git
- Experienced with various Services in IT sector like Azure DevOps, building and deploying applications by adopting DevOps practices such as Continuous Integration (CI) and Continuous Deployment (CD) in runtime with various tools like GitLab, Azure Repos

Anilkumar Jaladi

EXPERIENCE

April 2021 - Current

Sr DevOps Engineer, FPT India Pvt Ltd | Hyderabad, India

November 2019 - April 2021

DevOps Engineer, Intersources INC | Hyderabad, India

May 2016 - October 2019

SaaSops Engineer, CA Technologies Pvt Ltd (A Broadcom Company) | Hyderabad, India

May 2015 - May 2016

Webshpere Administrator, Magna Infotech (A Division Of Qness Corp Ltd) | Hyderabad, India

EDUCATION

2010

Diploma of Higher Education | MIT
University Of Salford, Manchester, UK

2008

Bachelor of Technology | Information Technology
Nalanda Institute of Technology, JNTU, Sattenapalle, AP

CERTIFICATIONS

Ultimate_AWS_Cloud_Practitioner_CLF-C02_2025 From Udemy
AZ-104 Microsoft Azure Administrator certification From Udemy
Redhat Certified Specialist in Openshift Administration From Redhat

HOBBIES AND INTERESTS

- Playing Cricket, Reading News

PROJECTS

- **IEnergy SRE Operations for Client Halliburton** (from May 2021 till now)
- *Project Goal is to provide SRE activities to the client that provide digital application solutions in Oil and GAS Energy sector*
- *Role: SRE*
- *Environment: AWS, Azure, VMware, AKS, EKS, Git, Terraform, Azure Devops, GitLab, Okta, New Relic, Opsgenie, AWX Tower, Salesforce, ServiceNow*

Responsibilities:

- To work on AWS services like EC2, IAM, S3, VPC, VPC Peering

- Experience on VMware Horizon, vSphere administration tasks, Workspace One and Horizon

- upgrades
- Having Good Exposure to NAS solutions like SoftNas, AWS FSX NetApp Ontap, Azure NetApp
- Working experience on Containerized applications using Docker and Kubernetes administration activities
- Involved in Incident Management, Change Management and RCA analysis for customer incidents
- Good exposure to Telemetry tools like New relic and integrated PowerShell, Shell scripts to monitor Application and Infrastructure resources
- Experience in Vulnerability Management and worked on resolution of vulnerabilities based on the severity of vulnerabilities
- Daily Scrum call participation to discuss the deployments, PBIs and sharing knowledge across team members
- Monitoring Applications, Infrastructure resources and work on P1,P2,P3 alerts based on the priority to detect early incidents and work towards their resolution before customer reports them
- Worked on SQL, Oracle Databases, backups, replication and developed Performance scripts
- Worked on PaaS technology Redhat OpenShift Administration
- Deployed Projects in Redhat Open shift that are installed on top of AWS for various Production and non-production clarity environments
- Involved in clarity PPM environments migration to AWS from Legacy Infrastructure
- Lead SSO Operations for our product Clarity PPM using Okta as Service Provider and have integrated many IDP systems like Azure, ADFS, Okta, Ping, Secure AUTH, SiteMinder etc.
- Hands on experience in trouble

- To work on AWS services like EC2, IAM, S3, VPC, VPC Peering, Security Groups, Subnets, SNS, EBS, Route53, Autoscaling, CloudTrail, CloudWatch, PrivateLinks, Transit Gateway, FSX Netapp

ONTAP and other AWS services

- To work various services in Azure like Virtual machines, Storage accounts, Virtual Networks, Load Balancers, Active Directory, VM scale sets, Key Vaults, CoreDNS, Private Link, Private Endpoint, Azure Netapp and other Azure services
- creating/modifying Terraform Modules for AWS, Azure resources as per customer requests
- Using Azure DevOps, building and deploying applications by adopting DevOps practices such as Continuous Integration (CI) and Continuous Deployment (CD) in runtime with various tools like GitLab, Azure Repos
- Work with VMware Horizon Administration tasks, VMware vSphere Administration tasks, Workspace One and upgrade horizon components to latest version
- To work with different vertical teams on the application deployment/support activities
- To work with Containerized microservice applications using Docker and administer Kubernetes activities like restarting PODs, resolving diff POD failures states, working with deployments, replica sets, daemon set, Node issues like CPU, memory, disk pressure
- Work with SAML 2.0 and trace the logs to resolve user logins to Environment
- Creating projects, templates in AWX tower to run day-to-day tasks
- To develop the PowerShell and Shell scripts and integrate them with New Relic to monitor application and Infrastructure resources
- Involve in Incident Management, Change Management, achieve defined MTTR for customer incidents, participate in RCA analysis for customer incidents
- To Participate in Vulnerability Management and to work on resolution of vulnerabilities based on the severity of vulnerabilities
- Installation of security agents like CBC, Qualys, Splunk, New Relic
- Daily Scrum call participation to discuss the deployments, PBIs and share knowledge across team members
- Monitoring Applications, Infrastructure resources and work on P1, P2, P3 alerts based on the priority to detect early incidents and work towards their resolution before customer reports them
- To work on SQL, Oracle Databases, backups, replication and developed database Performance scripts
- To develop scripts and integrate them with New Relic and create dashboards

• **Project 2: CA PPM SAAS Operations** (from May 2016 to April 2021)

- *Project Goal is to provide cloud and SaaS Operations for 400+ Clarity PPM Customer Environments*
- *Role: SaaSOps, DevOps Engineer*
- *Environment: AWS, Red Hat OpenShift, Git, Kibana, Sysdig, Jenkins, Okta, Oracle, PostgreSQL, ServiceNow, Salesforce, Ansible, Terraform*

Responsibilities:

- Perform cloud operations that involve AWS services like EC2, IAM, S3, VPC, VPC Peering, SNS, EBS, Route53, Autoscaling

- shoot and determine the root cause (RCA) for various issues for CA PPM such as application unavailability, Disk Space, High CPU, Memory and configuration issues
- Responsible for monitoring various applications, databases,

- Provisioning Projects in Redhat OpenShift for Production and Non-Production Stacks to deploy PPM environments
- Communicating to OpenShift resources through CLI using OC client for Pod operations like restarts, deployments, scaling, events
- Work with Version Control System Git to change configuration code and push them to master repository
- Working on Ansible Playbooks for day-to-day operations that are integrated with Rundeck
- Clone customer environments and upgrade them to Latest Clarity

Infra and Network issues and resolving using Nimsoft Monitoring tool and solving application issues and engaging cross teams to resolve them

Responsible for participation of customer calls and resolving the issues on call.

- Well versed with Production Support, 24/7 Tier 2 Technical supports, On call support duties, Production troubleshooting etc.

SKILLS

AWS
Azure
VMware
OmniSSA Horizon
Windows
Linux
Docker
Kubernetes
Red Hat OpenShift
OKTA
Git
GitLab
Terraform
Ansible
PowerShell
shell
New Relic
Opsgenie
Azure DevOps
SQL
Oracle
Salesforce
ServiceNow
WebSphere Application Server ND V6.1, V7.0, v8.0
Tomcat

PPM version for both Oracle and Postgres

- Work with Kibana Dashboards that are used for stack level monitoring and for log analysis
 - Exporting and Importing Jasper soft Custom contents for customers
 - Involved in Identity Access Management and responsible for customers SSO onboarding and worked with different IDP vendor integrations in setting up SAML 2.0 application for Clarity PPM using Broadcom Okta as Service Provider.
 - Unblocking Customer from Post SSO Implementation issues by getting on call with Customer SSO engineers
 - Providing regular application support for the customers that includes service catalogue tasks such as (application restart, database refresh, jasper imports, HDP OData, and standard catalogue tasks related to KB articles related to Clarity PPM to unblock any customers from any of the issues they observe)
 - Involved in Change management in applying latest patches, upgrades and configuration changes that use Git and Jenkins Pipeline
 - Monitoring applications using Nimsoft monitoring tool and Kibana Dashboards and fixing incidents related to CPU, Disk, OOM, application slow response, database disconnects etc.
 - Decommissioning Environments in Old Infrastructure once those are migrated to AWS
 - Participating in Incident management like application unavailability, Disk Space, High CPU, Memory and unblocking the customers from such incident
- Handling SEV1/SEV2 cases and participating in Swarm calls with cross teams

• Project 3: CA PPM On-Premise

- Project Goal is to provide application support using IBM WebSphere Application server*
- Role: WebSphere Administrator*
- Environment: IBM WebSphere Application Server 6.1, 7.0, 8.0, Windows 2003, Linux 5.X, DB2 and IBM HTTP Server*

Responsibilities

- Responsible for Installation and Configuration of Web Applications using WebSphere Application Server 6.1, 7.0, 8.0 IBM HTTP Server, plug-ins, applying fixes for WebSphere, http servers and plug-ins.
- Deploying EAR, WAR and JAR files on WebSphere Application Server and configuring various resources for applications.
- Implemented Clustering and maintaining WLM at both Plugin level and EJB level.
- Responsible for general WAS admin tasks like start and stop of Application Servers.
- Configured WebSphere resources including JDBC providers, JDBC data sources, connection pooling.
- Problem determination using local error logs and by running user

- Problem determination using local error logs and by running user traces and service traces.
 - Troubleshooting on issues such as federation of nodes and synchronization of nodes with Deployment Manager.
 - Configuring Global Security and LDAP security.
 - Monitored for Application core dumps or forced thread dumps to check for system objects using Thread Analyzer.
 - Managing security and performance optimizations for WebSphere Application Server.
 - Applying Fix Packs, Refresh packs to the already existing WebSphere versions.
- Involved in Troubleshooting on issues such as Out of Memory, 100% CPU Usage Hung Thread sessions, Session replication, JVM Crashes.
