Summary

- I am a Cloud/DevOps/DevSecOps Lead specializing in delivering innovative solutions to complex challenges using a wide range of technologies, including Virtualization, Integration and Configuration Management tools, and diverse infrastructures such as On-Premises, Bare-Metal, AWS, Azure, and GCP. My expertise also includes working extensively with Terraform, Kubernetes, and Ansible.
- Worked as a DevSecOps Engineer in a 24x7 uptime environment with strong automated build platform experience/integration using DevSecOps architecture.
- Built and customized Terraform modules from scratch, collaborated with testing teams, and handled troubleshooting activities.
- Experienced in building Terraform modules for VMs, RDS, Azure-AKS, Redis, Fluentd, etc.
- Upgraded the existing Terraform scripts with the latest version.
- Created Ansible Playbooks/roles to install Splunk on RHEL servers, deploy Oracle Filesystem,
- Possess expertise in DevOps dedicated to automation and optimization and have worked on consultation as well as implementation front for the CI/CD Pipelines.
- Implemented DevSecOps using various tools like Gitleaks, Gitguardian, GitHub Secret scanning, etc.
- Showcased advanced Automation in Build & Deployment procedures using TFS, Git, SonarQube, PowerShell, and Shell Script.
- Experienced in Git Stash, Pre-commit, Pre-Push, Talisman, Dependency check, Snyk SCA, Snyk container scanning, Checkmarks, SonarQube, CUBER, Kube-bench, Kube-hunter, Brinqa, SAST and DAST
- Experienced in DevSecOps AppSec Engineer
- Experienced in Developing DevSecOps pipeline for Kubernetes
- Implemented DevSecOps pipeline in CI-CD pipeline Using Azure-DevOps, ArgoCD, Jenkins, Looper, Concord, Gitlab
- Implemented Kubernetes engine on public & private clouds
- Experienced in Containerization and Infrastructure provisioning to improve the performance of Product Deployments using Docker, Kubernetes, Ansible, Terraform.
- Led teams for proper Sprint Planning and estimations of the User Stories. Acted as a Scrum Master and facilitated sprint planning, daily scrums, retrospectives, stakeholder meetings, and software demonstrations.
- Experienced in designing & implementing scalable cloud-based web applications using Azure.
- Hands-On experience in using Ansible and AWX (Ansible Tower) to quickly deploy and upgrade critical applications.
- Good hands-on experience in using Elasticsearch, Kibana, and Fluentd, CloudWatch, Nagios, Splunk, Prometheus, and Grafana for logging and monitoring.
- Experienced in networking KVM, Calico/Cilium, BGP, vSAN
- Experienced in designing security for data policies and standards.
- Worked on several Docker components like Docker engine, Hub, Machine, Compose, Docker Swarm, and Docker registry.
- Created Docker Compose file using YAML file for defining networks, services, and volumes to run Multi-Docker container applications and creation of custom Docker container images, tagging, and pushing the images to Docker Hub.
- Monitored and troubleshooted all production issues as a part of a 24x7x365 on-call rotation to ensure availability and performance meet our SLAs.
- Deployed and maintained CI/CD pipelines across development, QA, and production environments.
- Participated in RFPs, conducted POCs, evaluated open source tools, identified automation opportunities.
- Strengthened the application and environment security by applying standards and best practices and providing tooling to make development workflows more secure.
- Willingness to learn new technologies.

Education & Certifications

Bachelors in Information Technology, JNTU, India, 2005

Training & Certifications:

AWS Certified Solution Architect

CKA

CKS

GCP Associate Cloud Engineer

Technical Skills:

Operating Systems	RHEL/CentOS 5.x/6.x/7 ,Suse Linux, Linux-Ubuntu/Fedora, Windows7/8/XP/10, AWS- Linux CLI
Networking	VPC, Route-53, LDAP, DNS, FTP, DHCP, SSH, KVM, Calico/Cilium, BGP, vSAN
Databases	MySQL, MongoDB, Cassandra, PostgreSQL, SQL Server
Backup/Monitoring Tools	S3 (Simple Storage Service), Cron Jobs, Elasticsearch, Kibana and Fluentd, CloudWatch, Nagios, Splunk, Prometheus and Grafana
DevSecOps Tools	Git Stash, Pre-commit, Pre-Push, Talisman, Dependency check, Snyk SCA, Snyk container scanning, Checkmarks, SonarQube, Cuber, Kube-bench, Kube-hunter, Brinqa, SAST and DAST,Vulnerability tools
Source Control	GIT, SVN, Gitlab, Bitbucket, TFS, Team Forge, SVN Gerrit
Configuration Management	Ansible, Puppet, Chef, Terraform
Virtualization/ Containerization Technologies	VMWARE, VSPHERE 5.5/6.0, VCENTER SERVER, AWS ECS, Docker Container services, Pivotal Cloud Foundry, Vagrant
Cluster Management	Kubernetes, Docker Swarm
Languages	Python, Shell scripting, Bash, Groovy
Web/Application Server	IIS, Tomcat, Apache, Jboss, WebSphere Application Server, Web Logic
Build and Deploy Tools	ANT, Maven, Graddle, Jenkins, Bamboo, TeamCity, TFS, Azure DevOps, Gitlab,Github actions,ArgoCD
Infrastructure	AWS, Azure,On-Prem, VMware
Web Technologies/ Programming Languages	Python, Shell scripting and Powershell
Software Methodologies	Agile-SCRUM, Waterfall,
Project Management/ Bugtracking Tools	JIRA, Confluence, Rally, Bugzilla, Service Now

Professional Experience

Toyota

Title: Lead DevSecOps Engineer

Duration: May 2024 to Till date

Responsibilities:

- Designed and managed end-to-end CI/CD pipelines using **GitLab CI/CD**, automating build, test, and deployment processes across multiple environments.
- Provisioned and managed cloud infrastructure using **Terraform**, deploying scalable resources such as **EKS clusters**, **VPCs**, **RDS**, **Lambda functions**, **Redis (ElastiCache)**, and **S3 buckets** in **AWS**.
- Implemented **Helm charts** to standardize Kubernetes application deployments across development, staging, and production environments on **Amazon EKS**.
- Containerized applications using **Docker**, pushed images to **ECR**, and deployed to **EKS** clusters with auto-scaling and high availability configurations.
- Automated environment onboarding and infrastructure provisioning using **Terraform modules** and **GitLab CI/CD**, ensuring consistent and repeatable deployments.
- Performed **EKS cluster upgrades** and managed Kubernetes workloads, ensuring zero-downtime deployments and adherence to best practices.
- Integrated **SAT (Static Application Testing)** and **DAST (Dynamic Application Testing)** tools into CI/CD pipelines for continuous security validation.
- Managed infrastructure and deployment operations from development through production, ensuring reliable delivery of features and patches.
- Resolved infrastructure-related incidents and performance issues, ensuring high availability, reliability, and cost efficiency of AWS-based services.
- Documented infrastructure standards and deployment procedures in **Confluence**, supporting cross-team alignment and operational readiness.
- Conducted regular audits and optimization of AWS infrastructure components including **Secrets Manager**, **KMS**, **Route 53**, and **Redis**, improving security posture and performance.
- Streamlined development and release processes by integrating automated checks, notifications, and rollback mechanisms in GitLab pipelines.

Environment: Kubernetes, Docker, AWS, ArgoCD, GitLab, Terraform, Helm

Walmart

Title: Senior DevSecOps Engineer

Duration: June 2020 to May 2023

Responsibilities:

- Infosec-Security service gateway will serve as a platform to onboard any security services for automating the workflows, extending the services to other
- Onboard new application into CI/CD pipelines using Looper,Concord,WCNP,Terraform, Helm, AKS
- Integrated security tools into CI/CD pipeline Git Stash,Pre-commit, Pre-Push, Talisman, Dependency check, Snyk SCA, Snyk container scanning, Checkmarks, SonarQube, Cuber, Kube-bench, Kube-hunter, Brinqa, SAST and DAST
- Manage Kubernetes clusters on Azure AKS using Terraform, Helm to provision and deploy applications.
- Implemented Kubernetes-based continuous delivery pipelines with ArgoCD to automate build, test, and deployment of microservices.
- Maintained and configured Kubernetes networking and security with Calico, Istio, and RBAC to ensure cluster stability and compliance.
- Designed and deployed Kubernetes-based monitoring and logging solutions with Prometheus, Grafana, and Splunk to track system metrics and troubleshoot issues.
- Integrated Kubernetes clusters with Azure services such as Storage, Vnet, VM, DNS, Load balancer and FunctionApp to enable data storage, compute, and serverless functions.
- Create Docker images and managed container images with Artifactory and Bitbucket to ensure consistency, reliability, and version control of applications.
- Conducted Kubernetes training sessions for developers and operations teams to promote adoption and best practices.
- Participated in Kubernetes community events and forums to stay updated on latest trends, tools, and techniques.
- Worked closely with stakeholders to identify and prioritize Kubernetes-related projects and initiatives based on business needs and goals.
- Collaborated with cross-functional teams to implement DevSecOps processes and principles in Kubernetes-based environments.
- Utilized Terraform state files to detect infrastructure drift and reconcile any differences between the actual and desired state of the infrastructure.
- Upgrade AKS clusters, WCNP, Looper, Concord, Docker, Kubernetes, Azure, ArgoCD, Jenkins, and Artifactory application

Environment: AKS, Terraform, Helm, Azure, WCNP, Looper, Concord, Kubernetes, Github, Artifactory

Lowe's

Title: Lead DevOps Engineer

Duration: Mar2015 to June 2020

Responsibilities:

- Deploy code to various environments using ArgoCD, Terraform and Kubernetes
- Utilized Jenkins, Terraform, and Kubernetes to deploy code to various environments, ensuring consistent and reliable delivery.
- Built and deployed AWS resources, such as RDS and Lambda, using Terraform, ensuring a reliable and scalable infrastructure.
- Onboard new application into CI/CD pipelines using Jenkins, Terraform, Helm, EKS
- Upgrade EKS Kubernetes Clusters
- Experience in SAT & DAST
- Automated the deletion of old branches in GitLab using scripts, improving efficiency and reducing clutter.
- Identified opportunities for automation and standardization of the infrastructure, leading to more efficient and stable development and deployment processes.
- Troubleshoot and resolved operational issues related to the infrastructure, ensuring high availability and optimal performance.
- Created and updated build run books in Confluence, improving documentation and ensuring consistency across environments.
- Conducted continuous assessment of the infrastructure and technical environment, identifying and addressing any gaps or inefficiencies on AWS cloud.
- Automated and improved development and release processes, reducing manual effort and improving efficiency.
- Deployed and troubleshooted Kubernetes deployments for all environments, ensuring reliability and scalability of the infrastructure.
- Managed CI/CD pipelines from lower development environments all the way to production, ensuring a consistent and reliable delivery of code changes.

Environment: Kubernetes, Docker, AWS DevOps, ArgoCD, Jenkins, Terraform, Helm

TCS

Title: Assistant Consultant

Duration: Nov2006 to Feb2015

Responsibilities

- Involved in preparation of Automation Development plan
- Design Hybrid driven Automation framework
- Identifying the end-to-end Scenarios for automation
- Data driven testing carried with different sets of data for critical functionality
- Worked as an effective coordinator between Development team and QA team
- Used Jenkins to Implement CI/CD process and cut release times by 20%
- Complete responsibility for setting up builds for the complete application.
- Ownership of maintaining the Redhat Linux environments for the Dev, Test, UAT, and production.
- Setting up pipelines for code quality testing using sonarqube and code coverage testing using JaCoCo.
- Written ant.xml file for complete build process from dev till production.
- Support agile development teams in optimizing the speed, scalability, and resilience of our IT applications
- Maintaining software using on-call rotation, monitoring, and troubleshooting day to day operations
- Contributed to reducing deployment time for critical agile project infrastructure from 8 hours to a minutes

Environment: Windows, Linux, Jenkins, Selenium, Java, Python, QTP, QC, Jmeter, LoadRunner
