Summary

- Experienced AWS DevOps Engineer with 4 years specializing in AWS, Kubernetes, Jenkins, Docker, Linux and proficient in monitoring and logging. Proven track record of optimizing cloud infrastructure, deploying scalable solutions, and implementing robust CI/CD pipelines for enhanced system performance.

Professional Experience

Infosys Ltd. - Senior Associate Consultant

August 2021 - Present

- Utilized Terraform’s capabilities to craft and automate AWS resource configurations, optimizing deployment efficiency and ensuring standardized setups.
- Implemented Docker for containerization, Kubernetes for orchestrating containers, and Helm charts for managing app deployments. Experienced in building, deploying, and scaling applications efficiently across environments, achieving a **40%** improvement in deployment speed.
- Enabled collaborative development by employing Git and GitHub for version control, ensuring a synchronized approach and seamless coordination among developers for project progress.
- Familiar with Kubernetes Dashboard for monitoring and managing Kubernetes resources through a user-friendly web interface. Experienced in using it to visualize resources, troubleshoot issues, and manage workloads effectively which reduces troubleshooting time by **30%**.
- Leveraged Datadog for real-time monitoring and analytics, achieving a **35%** reduction in downtime. Skilled in visualizing system metrics to improve performance and reliability.
- Proficiently managed and stored .war and .jar artifacts in JFrog Artifactory, ensuring efficient artifact repository management.
- Integrated Jenkins for continuous integration and continuous deployment (CI/CD), orchestrating automated workflows and ensuring **60%** efficiency increase in software development life cycles.
- Conducted code quality analysis with SonarQube, ensuring a minimum of **80%** code quality across the code base.
- Used JIRA for agile project management, tasks and issue tracking and Confluence for documentation and team collaboration.
- Experienced in creating Dockerfile for building container images and implemented Jenkinsfile using Groovy Scripting for automating deployment pipelines.
- Skilled in using Bash scripting to automate deployments and Proficient in Linux Operating System.

Skills

- Cloud Services:** AWS (EKS, EC2, VPC, Route 53, RDS, KMS, S3, SNS, IAM, Load Balancing, ASG, Secrets Manager, AMI, CloudWatch)
- Operating System:** Linux
- Containerization and Orchestration:** Docker, Kubernetes
- Scripting:** Bash Shell, Groovy, YAML
- IaaS:** Terraform
- Version Control & SCM:** Git, GitHub, Bitbucket
- CI/CD:** Jenkins
- Monitoring and Logging:** Grafana, Kibana, EFK Stack, Datadog
- Artifact Management:** JFrog
- Code Quality Analysis:** SonarQube
- Project Management:** JIRA
- Other Skills:** Rancher, PuTTY, Helm, Confluence, Kubernetes Dashboard, Black Duck, Ansible, Python, Harbor, Trivy

Certifications

- AWS Certified Solutions Architect Associate

Education

Kalasalingam Academy of Research and Education
B.Tech in Electronics and Communication Engineering

2017-2021

Achievements

- Promoted to Associate Consultant in recognition of outstanding performance – April 2023
- Received Unit RISE Award for outstanding contributions and unwavering commitment in H2FY25 (Oct 2024 – Mar 2025)
