Email: yash1861991@gmail.com

Technical Skills

Programming Languages

C/C++	
Java	
C#	
Python	
SQL	
Perl/PowerShell	

Development Frameworks

Design Patterns	
Data Structures	
Algorithms	
Database	
System Design	
.Net Core	
EF Core	
Web API	
CI/CD	
Git	
Docker	
Containerization	
OpenShift	
Azure Cloud	
Machine Learning	
Stratus/ VOS	
Windows	
Linux	

Software Development Approach

Agile	
Waterfall	

Leadership

- Worked as **Program Representative** for MTECH, MSC from SCSE School, VIT.
- Worked as **Lead Software Engineer** and **Individual Contributor** in Micron Technology.

About Me

An experienced C/C++, C# & Java developer with overall 9.7 years of experience in softwares & system level design development. Always keen to learn new technologies, passionate about building scalable, reliable, efficient software systems and looking forward to take more responsibility, leadership over project delivery.

Work Experience

Software Developer, February 2023 – July 2025

Samsung Semiconductor India Research, Bangalore, India

Being Software Developer, I am responsible for development of CXL platform framework, API development for mailbox and Sideband Protocol like MCTP, SPD, Fabric Manager Service commands, Multi-DUT solutions, Low Latency development, Device communication (IOCTL, PCIe, I2C) and fixing bugs.

Technology: C/C++, Multithreading, Low Latency development, GDB, Scripting: Python, Shell, Data Structures, Algorithms, Design Patterns, FPGA, QEMU, Docker, Containerization, Linux, Git, Visual Studio

Software Developer, August 2019 – February 2023

Micron Technology, Hyderabad, India

Being Software Developer, I am responsible for development of FAB applications, Docker and containerization of applications, deployment of applications on IIS and Openshift cloud environments and fixing bugs.

Technology: C/C++, C#, Multithreading, GDB, Scripting: Perl, PowerShell, .Net core, EF core, Web API's, Micro Services, Data Structures, Algorithms, Design Patterns, Docker, Containerization

Game Play Programmer, September 2018 – March 2019

Ubisoft Entertainment, Mumbai, India

Being programmer, I am responsible for client side gameplay development, incorporating ubisoft services and fixing bugs.

Technology: C/C++, Multithreading, Gameplay, Windows, Perforce, Visual Studio

Software Developer, July 2016 – August 2018

JP Morgan and Chase, Mumbai, India

Being core team member, I am responsible for development of Chase PaymentTech Stratus server side enhancement, focusing on stability.

Technology: C/C++, Java, Multiprocessing, Stratus backend server, Low Latency development, Shell Scripting, Git

Software Developer Intern, July 2015 – May 2016

ORACLE, Bangalore, India

Being intern, I was sole responsible for development of JUNIT Automation suite for android and IOS application. I also developed predictive analytics model.

Technology: Java, JUNIT suite, Data Analytics, Regression, Machine Learning

Education

Master's in Computer Science and Engineering, (2014 - 2016)

Vellore Institute of Technology, Vellore, TN

Data Structures, Algorithms, Data Mining, Database Systems, Networking

CGPA: 9.40 / 10

Bachelor's in Computer Engineering, (2009 - 2013)

University of Pune, Pune, MH

% (CGPA): 66 (7.42), First Class with Distinction

High School: HSC: 89.83 % (2009), SSC: 83.38 % (2007)

Extra-Curricular Activities

- Certification Course in **C and C++ Programming with Data Structure**
- Certification of **Excellence in Core Java**
- Awarded Certificate of Merit in **Java Programming** with Grade **A**
- Mentor & Trainer on **C++, C#, Web API, Micro Services development, Security**
- Certification course in **Machine Learning from Stanford University** using Coursera
- Certification course in **C++17**

Achievements

- Multi-DUT** solution helped **Samsung in Optimizing Infrastructure Cost in billions 2025**
- Completed **Algorithms and Problem Solving** from **AlgoExpert.io 2022**
- Completed **Microsoft Open Hack Container Challenge 2021**
- Runner up **MI Hackathon 2020**
- Awarded **Best Team of Year 2017** in **JP Morgan Chase**
- Awarded as **Certificate of Merit** student with **5th rank** holder in MTECH CSE.
- Secured **17th All India rank** in **Master's Entrance Examination**.
- Awarded Certificate of **National Language Examination** with **First Class**
- Won **Second Prize** in **Talent Student Search Examination** conducted by National Centre for Rural Development
- Won **First Prize** in **Talent Student Search Examination** conducted by National Centre for Rural Development Consecutive two years.

Industrial Projects

- **CXL Framework Platform**
Responsibility: C++11 code development, Based on CXL Specifications API development for storage platform, SWIG layer Python Wrapper Service, Low Latency development, Device communication (IOCTL, PCIe, I2C), Aardvark, Beagle trace for packet analysis, Mailbox and Sideband Protocols like MCTP, SPD, FM Service API development, CXL CLI
- **Multi-DUT Proxmox Solution**
Responsibility: Virtualized environment using VMs for each NVMe device, PCIe Pass-through, Shell Script development, Docker Containerization of Host application, Patented Solution, Cost Saving
- **Shipping Disposition, Probe Product Tracking**
Responsibility: C++11 code development, Http requests and response handling, Windows to Linux Migration, Error handling, Bug fixing, Debugging, Multithreading, Unit Tests development, Docker Containerization of server
- **MIPC Side Car Protocol**
Responsibility: C++11 code development, Algorithms development, Error handling, Bug fixing, Debugging, Unit Tests, Multithreading, Design Patterns, Creating CI/CD pipelines, Docker Containerization of protocol
Sidecar: By adding existing MIPC library into web API will make API heavy and slow so come up with SideCar protocol, MIPCSideCar deployed with API in a single pod in Openshift, REST response Translator, No security required, it has two flows
Subscription Part: MIPC Client – MIPCSideCar – Web API
Send Receive Part: Web Client – Web API – MIPCSideCar – MIPC Client
- **Local Environment on Cloud**
Responsibility: It's a POC to meet the requirement of having complete local environment on cloud platform, Having VMs and setting existing SQA environment on cloud VM so based on need basis can spin-up and spin-down the VM , Cost saving
- **Growtopia Game Development**
Responsibility: C++ code development, network, multithreading, error handling, trophies, bug fixing, third party services and some other enhancements
Ubisoft Services - incorporated ubisoft services which are used to track player progression and stats during the gameplay in game.
Network – developed multithreaded application for identifying PS4 network.
Trophy Pack – developed multithreaded application for unlocking in game PS4 trophy.
- **Batch Duplicate Synchronization**
Responsibility: C code development, Multiprocessing, in submission file might be having duplicate transaction and that duplicate transactions will be synchronized across servers/modules.
- **Chase Front End Processing Small Enhancements**
Responsibility: C/C++ development, Multiprocessing, stratus server, authorization codes mapping for visa and master card, files pass through from stratus to other systems, Acknowledgement processing, SNDM protocol, Air Canada airlines is sending according to their specification input submission file to stratus, data record parsing implemented, some small enhancements and analysis
- **Machine Learning with Predictive Model Design**
Responsibility: Java development, Come up with linear regression mathematical model and using linear regression model developed recommended system for live interaction, derived machine learning rules using Decision Tree.
- **Automation Framework for ORACLE Sales Cloud Applications**
Responsibility: JUNIT development framework for both Android and IOS platform and include REST Automation also.

Course Projects

- **Music Compositions Using Idea Generation Algorithm Based System** (<https://github.com/YashAmondkar/MachineLearning-IdeaGeneration>)
Predefined set of rules to make machine train and newly generated set of combinations from algorithm will be given to machine, and machine with its own set of ideas thus resulting in achievement of thought process.

Independent Projects

- **Kernel Based New Refinements for Rough K-Means Clustering**
Rough k-Means algorithm was refined by Peter to develop a refined algorithm which shows lesser dependency of the initial assignment of the data objects to the clusters. The basic algorithm of Lingras was extended to develop a kernel based rough clustering algorithm.
