

Anandaraj Srinivasan

Technocrat Engineering leader with 11+ years of experience, seeking Staff Engineer, Principal Engineer, Solution Architect, or Product Engineering Lead roles to drive cloud-native modernization, platform scalability, and zero-to-one product initiatives. Aiming to add value to tech-driven organizations through architecture leadership, legacy transformation, and cross-functional collaboration.

Profile Summary

- ❖ **Led the architecture & end-to-end development of a cloud-native Fleet Risk Inspection Platform at Maersk**, integrating security, compliance, reporting, and workflow orchestration—resulting in ~\$10M operational risk mitigation across 1000+ vessels.
- ❖ **Delivered \$1.5M+ in annual cost savings** by modernizing legacy monolith systems into scalable .NET 8 microservices, incorporating database refactoring, modern auth (OAuth2/JWT), and observability tooling (Prometheus, Grafana).
- ❖ **Improved CI/CD velocity by 40%** through DevOps automation using GitHub Actions and Azure DevOps; reduced downtime risks by embedding quality gates and automated deployment pipelines.
- ❖ **Architected enterprise-grade platforms** using event-driven and CQRS-based microservices to support high-volume, mission-critical use cases for global users in logistics, healthtech, and SaaS domains.
- ❖ **Spearheaded cloud-native transformation** leveraging Azure AKS, App Services, Serverless Functions, and cost-optimized scaling, enabling product resilience and reliability across APAC and EMEA.
- ❖ **Hands-on exposure to Large Language Models (LLMs) such as ChatGPT(Open AI – GPT-4), GitHub Copilot, and AI-driven automation tools** to streamline workflows, enhance productivity, and drive intelligent decision-making across business and technical functions.
- ❖ **Drove engineering efficiency and process improvement** by embedding DevSecOps, reducing audit cycle time by 60%, and introducing smart compliance engines for proactive regulatory management.
- ❖ **Led full-cycle product engineering ownership** across requirement discovery, design, development, and release—closely aligning technical roadmaps with business OKRs and product vision.
- ❖ **Enabled onboarding of new B2B customers** through platform enhancements and scalable design, directly contributing to business expansion and product-led growth initiatives.
- ❖ **Mentored and coached 3 engineers into senior roles** by implementing structured learning plans, tech reviews, and knowledge-sharing sessions—fostering a culture of technical excellence and ownership.
- ❖ **Led cross-functional collaboration across Product, Design, Infra, and Security teams globally** (India, Denmark, Singapore) to ensure alignment, reduce delivery blockers, and scale strategic technical decisions.
- ❖ **Pioneered platform modernization roadmap**, conducting architecture reviews and prioritizing tech debt reduction to enhance system performance, maintainability, and scalability.

Core Competencies

Scalable Architecture	Cloud-Native Engineering (Azure)	Microservices & Event-Driven Designing
Legacy Modernization	Product Engineering Ownership	DevOps Automation (CI/CD)
Platform Modernization	Enterprise SaaS Delivery	Technical Strategy & Innovation

Soft Skill

Negotiation & Conflict Management
Visionary and Decision Making
High Business Ethics & Trustworthy
Innovater & Intuitive
Leadership and Delegation

Education

2014	MCA (Computer Application) from Karunya University, Coimbatore
2011	B.Sc. (Information Technology) from SNR Sons College, Coimbatore

Career Timeline

Work Experience

Lead Software Engineer Maersk GSC India Pvt. Ltd., Bengaluru	May 2022 – Present
- Achieved \$1.5M in annual operational savings by developing a digital fleet inspection platform, reducing manual workload, asset downtime, and voyage-related risk. - Accelerated inspection cycles, equipping captains with real-time reports to enable faster, data-driven voyage decisions. - Owned end-to-end Fleet Inspection platform architecture and roadmap, delivering scalable compliance solutions for 1000+ vessels. - Designed a resilient 5-tier microservices architecture using .NET 8, AKS, PostgreSQL, Kafka, and CQRS patterns, enabling independent scaling and faster releases. - Digitized vessel risk assessments with smart rule engines to auto-flag non-compliance and high-risk behaviors - Led successful migration from legacy monoliths to container-native microservices, ensuring zero data loss and seamless transition - Boosted CI/CD velocity and delivery quality through gated pipelines, shift-left security, and code quality automation via Azure DevOps. - Delivered user-friendly frontends using React with embedded Power BI, enhancing visibility into risk metrics and compliance benchmarks. - Drove functional and non-functional design by translating business epics into modular, auditable features with complete HLD/LLD coverage. - Facilitated global stakeholder workshops, converting operational gaps into traceable, digitized user journeys. - Structured and scaled cross-functional product teams, leading hiring, onboarding, and performance-aligned role distribution. - Managed Agile execution through SAFe ceremonies, sprint planning, and OKR alignment to maintain release cadence and delivery flow. - Chaired architecture compliance reviews, aligning platform governance with cybersecurity, data, and enterprise architecture standards.	

Senior Engineer – Product Development Harman Connected Systems, Bangalore	Dec 2020 – May 2022
- Built a cloud-native IoT telemetry platform for Honeywell to monitor industrial asset health, usage patterns, and failure trends at scale. - Owned the full product lifecycle, mentoring peers in modular architecture, code reuse best practices, and enhanced unit test coverage. - Engineered asynchronous microservices using .NET Core, RabbitMQ, and Event Grid to support scalable, decoupled backend processing. - Established secure CI/CD pipelines, integrating AKS, Docker image scanning and Azure Key Vault for secrets management and delivery integrity. - Delivered anomaly detection dashboards using Grafana, enabling visualization of health gaps, SLA breaches, and compliance metrics. - Reduced failure response times by enabling predictive telemetry alerts and automated fault escalation workflows. - Ensured high availability by deploying multi-geo AKS clusters with intelligent traffic routing and zone-based failover mechanisms. - Improved audit readiness through automated, ISO-compliant scorecards—consistently enhancing quarterly audit performance.	

Senior Software Engineer Alligator Software India, Coimbatore	Mar 2017 – Dec 2020
- Engineered full-stack SaaS platforms in CRM and HealthTech domains, delivering scalable, cloud-integrated solutions across diverse user bases. - Designed dynamic micro frontends using React and Angular with real-time state updates, access-controlled views, and responsive UI components. - Built health-monitoring dashboards using Power BI, integrating sensor data and patient history to support personalized care planning. - Automated insurance workflows using Azure Functions, Logic Apps, and OCR engines—streamlining claims with cloud-native orchestration. - Saved hours of manual processing by implementing ML-powered document classification, significantly reducing claim cycle times. - Developed multi-tenant CRM for Bridgestone, enabling behavioral analytics, segmentation, and targeted campaign management. - Boosted mobile app retention and adoption through QR-based workflow integrations, enhancing user engagement and feature usage.	

Previous Work Experience

Software Developer WAFE Auxiliary Chemicals Pvt Ltd.	Nov 2014 – May 2016
Senior Software Engineer Studio Soft Solutions Pvt Ltd.	May 2016 – Mar 2017

Technical Skills

Cloud & DevOps	Azure (AKS, App Services, Functions, Event Grid, Logic Apps, Key Vault, Azure SQL, Data Factory), Docker, Kubernetes, Azure DevOps, CI/CD, Grafana
AI Tools	Large Language Models (LLMs), GenAI, ChatGPT, GitHub Copilot, Notion AI
Backend & Architecture	.NET 8, .NET Core, C#, ASP.NET Core, Web API, Entity Framework, EF Core, CQRS, Event-Driven Architecture, Microservices, Kafka, RabbitMQ
Frontend	React.js, Angular, TypeScript, Javascript,Redux, HTML5, CSS3
Mobile Development	Xamarin Forms
Data & BI	SQL Server, PostgreSQL, Power BI, Azure Cognitive Services , Gen AI
Engineering Practice	TDD, Unit Testing (NUnit, MSTest, Jest), Secure SDLC, Code Reviews, Agile/SAFe

Personal Details

Date of Birth: 14 th March 1991	Languages Known: English & Tamil	Location: Bengaluru
