SKILLS

Programming Language: Javascript (ES6+) ,SQL

Front-End Frameworks: Angular 16/15/12/10/8/1.8, TypeScript, Redux, NgRx, rxjs, Bootstrap, Angular material, HTML5, CSS3, Underscore JS, JQuery, Rest APIs, Storybook.

Back-End Frameworks: Node.js, Express.js, RESTful APIs, MongoDB, Mongoose

DevOps And Deployment: CI/CD pipelines, Jenkins, Azure, Octopus

AWS services: AWS S3, EC2

Testing: Jasmine, karma, Jest

Other Tools: Webpack, npm, Postman, JIRA, VSCode

WORK EXPERIENCE

Amadeus, Bangalore

July 2021 - Present

Senior Software Engineer

- Designed and implemented frontend applications with Angular 16/15/12/10, utilizing modules, services, templates, directives, and dependency injection to enhance functionality and user experience.
- Integrated Angular frontend with Node.js backend, ensuring seamless data flow and efficient communication between client and server components.
- Designed and implemented RESTful APIs using Node.js and Express, incorporating robust authentication and authorization mechanisms to ensure secure access and data protection.
- Implemented state management with NgRx, leveraged RxJS for reactive programming, and incorporated internationalization (i18n) to support multiple languages and enhance user experience.
- Utilized AWS Secrets Manager and AWS Systems Manager Parameter Store for secure management of sensitive configuration files in Node.js.
- Designed and implemented comprehensive error handling and logging mechanisms to enhance monitoring and troubleshooting for both frontend and backend systems.
- Experienced in designing and managing deployment pipelines with CI/CD practices, enhancing automation, efficiency, and reliability in software delivery.

Mindtree, Bangalore

Jan 2017 - July 2021

Senior Engineer

- Developed dynamic, single-page applications using Angular, including features such as routing, lazy loading, change detection strategies and data binding.
- Developed and maintained applications using Angular (10/8/7/1.8).
- Built responsive web applications using Angular JS (v1.x) and gradually migrated to Angular (v2+).
- Implemented responsive designs by utilizing Angular tools and CSS frameworks, including Bootstrap and Material Design. for a cloud-based data warehouse supporting a US health insurance platform with over 35 million users.
- Implemented Angular Universal for server-side rendering.
- Verified Angular components through Storybook, ensuring consistent UI and functionality.
- Proficient in developing applications and performing unit testing with Jasmine and Karma, as well as managing work-flows using Gulp and NPM.
- Utilized version control systems (Git) and agile methodologies (Scrum) to manage project workflows and track progress.

EDUCATION

Jawaharlal Nehru Technological University

June 2012 - April 2016

B.TECH. in Electronics and Communication Engineering

PROJECT WORK

Project 1:- BSS Smart Scripts

- Developed and maintained several web applications using Angular and Node.js, focusing on creating reusable components and services.
- Implemented authentication and authorization mechanisms to secure applications and manage user access.
- Participated in code reviews and mentoring junior developers to uphold best practices and coding standards.
- Liaised with clients to gather and analyze business requirements, and reviewed functional and technical specifications to finalize high-level design (HLD) and low-level design (LLD) for projects.

Project 2:- Order management system

- Spearheaded the development of a large-scale enterprise application using Angular, improving user experience and operational efficiency.
- Designed and implemented reusable Angular components and services, enhancing maintainability and reducing code duplication.
- Collaborated with UX/UI designers to deliver high-quality, responsive interfaces and ensured cross-browser compatibility.
- Optimized application performance, including lazy loading and code splitting, resulting in a 20% reduction in load times.

Project 3:- Flydubai

- Developed and maintained several customer-facing web applications using Angular, achieving high performance and responsiveness.
- Implemented state management to manage complex application states and enhance data flow.
- Wrote unit and end-to-end tests to ensure code reliability and address bugs, maintaining a high standard of code quality.
- Designed and implemented project architecture and internationalization support for three languages.

Project 4:- SITA – SRDT

- Developed multiple projects using Angular 7 and AngularJS.
- Implemented responsive layouts utilizing Angular tools and CSS frameworks, including Bootstrap and Material Design.
- Supported mobile versions of applications using NativeScript.
- Designed and developed a library-based structure for effective code maintenance and modularization.

Project 5:- WTR – UI World Tracer

- E2E development of angular application including design, implementation and deployment while ensuring robust code quality through comprehensive unit testing with jasmine and karma
- Migrated the application from AngularJS to Angular 8, enhancing functionality and maintainability.
- Developed application branding and themes, including custom designs based on airline login requirements.
- Worked on proof of concept (POC) for micro-front-end application development.

AWARDS AND CERTIFICATES

- **Spot On Award:** Expert Thinking
- **Coursera** Node js ,Express
- **Coursera** Google kubernetes Engine
